## **ENCOTEC ETCHER/CLEANER**

Encotec Etcher/Cleaner is a specially formulated product designed for cleaning and etching metal and concrete surfaces. It is highly recommended for proper surface preparation prior to the spray application of insulation.

Encotec Etcher/Cleaner acts as an emulsifier which encapsulates surface contaminants such as dust, oil, grease, silicone coatings, etc. When the sprayed surface has completely dried to a white powder, usually in a 24 hour period, rinse the surface with water.

NOTE: It is important to check the surface to be sure it is free of all contaminants. Should any remain, it may be necessary to reapply the Encotec Etcher/Cleaner.

### **MIXING INSTRUCTIONS:**

**1 Bag Encotec Etcher/Cleaner  
50 Gallons of Water**

Add Encotec Etcher/Cleaner to 25 gallons of water, then while stirring, add the remainder of the water to the mix. The mixture should be stirred until all of the crystals are dissolved.

**COVERAGE:** Approximately 10,000 SF per bag

**PACKAGING:** 19 lb. kraft paper bag
